

reprocontrol

YOUR TOTAL REPROGRAPHIC WORKFLOW MANAGEMENT SYSTEM

- queues and clusters for total efficiency
- simple user interface design
- reliable cost tracking
- integrate any printer, scanner and folder
- platform-independent, seamless connectivity
- perfect color management
- total print efficiency and image quality
- flexible modular setup adapts anytime

reprocontrol is an extremely powerful software designed to combine all reprographic hardware into one seamless workflow, providing users with advanced tools to significantly increase productivity and improve quality of print output.

reprocontrol software features

In its elaborate workflow, reprocontrol ties all production steps and hardware into one simple user interface and uses all resources to the maximum.

Created to set new standards in the world of reprographics, reprocontrol offers a modular approach to be custom-tailored to any reprographer's budget and growth.

Countless print management tools significantly increase productivity and reduce perimpression cost.

At the same time, a multitude of image enhancement tools and color management features deliver consistently outstanding print results.

- efficient all-in-one workflow
- scan, copy, RIP and print in one simple interface
- integrate hardware from all manufacturers
- advanced cost tracking and cost preview for every print job
- job monitor and user rights management

reprocontrol workflow

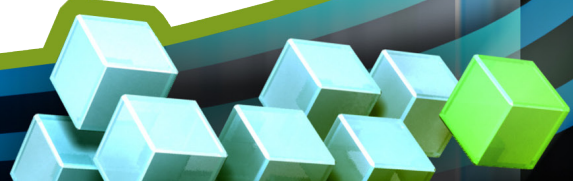

Within minutes, reprocontrol perfectly integrates all components of the current setup into one smooth and easy-to-use system.

Presets for any type of job are arranged one single time and printers organized into different clusters to maximize production throughput and enhance efficiency.

reprocontrol's unmatched workflow features ensure the process from scanning a file to picking up a neatly folded copy is only matter of a few clicks and a few minutes.

The intelligent client-server setup allows users to submit any number of jobs simultaneously.

- connect all LED, inkjet, small format printers and scanners
- open interface to print straight from external applications for maximum flexibility
- non-stop performance with unattended batch and overnight functions

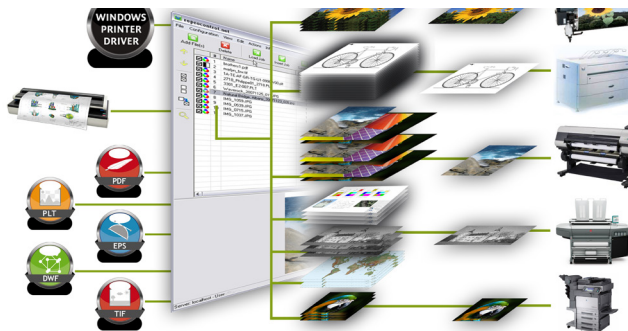

reprocontrol clusters and queues

With their virtually endless versatility, reprocontrol's queues and clusters enable any type of setup for all desired print output, guaranteeing cost-effectiveness on every print job.

They simultaneously ensure the best possible print results at all times through their perfect setup.

Queues and clusters enable users to easily prioritize jobs, significantly increase output and add the advantages of a multi-roll printer to the printing environment.

reprocontrol's unlimited number of queues permits simple one-click submission to the matching printer clusters.

The combination of any printers into CAD, graphics, monochrome or multifunction clusters will significantly reduce perimpression cost for substantial time, media and labor savings.

-  submit jobs with a single click
-  always achieve perfect printouts
-  prioritize jobs of importance
-  increase productivity through overnight and batch printing

reprocontrol hardware

reprocontrol guarantees a tight integration of all reprographic devices into a seamless workflow.

Scanners, printers, and folding machines can be fully configured through reprocontrol's intuitive user interface and will communicate exact ink and media usage to reprocontrol's integrated cost tracker to ensure efficiency at all times.

reprocontrol connectivity

One of the many exceptional features customers value most in reprocontrol is its unlimited connectivity. The independence from certain platforms, manufacturers or browsers provides a new era of freedom for reprographic businesses.

Seamless integration of the LPR/LPD protocol allows simple submission of jobs from Mac, Linux or Unix as well as Windows, while the advanced rc.windriver ensures tight integration of DTP, graphics editors and any other external applications.

reprocontrol's superior hotfolder feature allows simple drag & drop of printable files into a designated location anywhere on the network.

The universal webclient guarantees absolute flexibility in submitting print jobs from anywhere in the world and from any internet device, be it a laptop, smartphone or tablet PC.

reprocontrol color and image quality tools

reprocontrol provides professional scan and image filters as well as a number of editing tools to improve and enhance images before submission.

Advanced color management takes over necessary color profile conversion, ensuring colors are always the same from opening the file to collecting the printout.

reprocontrol offers a range of options for calibrating hardware. Use a spectrophotometer for the most advanced calibration, download profile libraries or use simple closed loop calibration.

-  color management in L*a*b* color space and full support of sRGB, CMYK and HKS colours
-  advanced and simple image enhancement
-  wide array of grayscale features
-  unique color management for HPGL, HPGL/2 and HP-RTL files
